## RESTAURANT FOOD SCRAPS COLLECTION PROGRAM GUIDE

Welcome to your restaurant's food scraps collection program! Follow these concise steps for easy onboarding, engagement, and great results with minimal contamination.

### INTRODUCTION

Implementing a food scraps collection program in your restaurant helps keep organic waste out of landfills, supports sustainability, and can even improve efficiency. This guide will provide you with the necessary tools and tips to start collecting food scraps effectively in both front-of-house and back-of-house areas.

02

## THE IMPORTANCE OF COMPOSTING IN A RESTAURANT SETTING

COMPOSTING IN A RESTAURANT SETTING IS VITAL FOR SEVERAL REASONS.

- 01 Reduces Overall Disposal Costs:**
- 02 Environmental Impact:** Composting reduces methane emissions from landfills, a potent greenhouse gas contributing to climate change. It transforms food waste into nutrient-rich compost, which enhances soil health and supports local agriculture.
- 03 Operational Efficiency:** Separating food scraps can streamline waste management processes and reduce overall waste disposal costs. Restaurants save money by separating food waste from trash through reduced waste disposal fees, as food waste is heavy and bulky. This leads to lower frequency and cost of waste collection. Participating in municipal composting programs can also cut down costs, and some restaurants may generate revenue or tax benefits by selling or donating compost. Additionally, monitoring food waste helps optimize purchasing decisions, reducing over-ordering and spoilage. Lastly, promoting sustainability can attract environmentally conscious customers, potentially boosting sales. It can also lead to a cleaner and more organized kitchen environment, promoting better hygiene and efficiency.

### 01 WASTE AUDIT

**Audit:** Understand the types of waste your restaurant produces. Here's an easy and effective way to conduct your waste audit:

- Compare** the number of buckets (food waste) to the number of garbage bags (total waste) from the previous day. While not exact, this method offers a rough estimate of the proportion of food waste.
- Repeat:** Perform this practice for several days to get a more accurate and consistent estimate. This helps in determining the size and number of food waste bins needed for the business.

### 02 FIND A COMPOST HAULER

Contact your current waste hauler to check if they offer organics collection. If not, find a hauler in your area that does. To help remove the barrier of researching providers and comparing prices, EcoSafe's calculator make's it easy: <https://ecosafe.green/bag-calculator/>

### 03 CHOOSE THE RIGHT TOOLS

- Bins:** Order enough bins for the estimated food waste.
- Bags:** Ensure you have the right-sized compostable bags for your bins.

EcoSafe's calculator make's it easy: <https://ecosafe.green/bag-calculator/>

07

## CONTAMINATION REDUCTION STRATEGIES

Reducing contamination in a restaurant's food scrap collection program is crucial for its success. Here are some effective strategies to minimize contamination:

- 01 CLEAR AND CONSISTENT SIGNAGE**  
**Visual Aids:** Use posters with images and examples of what can and cannot be composted. Place these above or on the bins.  
**Language:** Ensure signs are in the primary languages spoken by your staff and customers.
- 02 STAFF TRAINING AND ENGAGEMENT**  
**Initial Training:** Conduct comprehensive training sessions for all staff members, explaining the importance of proper sorting and the negative impacts of contamination.  
**Regular Refreshers:** Hold periodic training sessions to reinforce proper practices and introduce any updates.  
 Incorporate reminders or updates into other regular training they may already do. If your restaurant does beverage training or new menu training when products change, add one to two notes on the composting system in those sessions.
- 03 CUSTOMER EDUCATION**  
**Online Engagement:** Create a social media plan about your efforts and post informational materials around your restaurant. Staff story-telling is a practical way to connect and educate.  
**Table Tent Cards:** Place informational cards on tables explaining the composting program and what can be composted.
